

A LITTLE CAR NEWS

THE MONTHLY NEWSLETTER OF THE CENTRAL TEXAS MICRONUTS CAR CLUB IN AUSTIN, TEXAS

AUGUST 2006 INTERNAL COMBUSTION TURNTABLE EDITION

NEXT MEETING: THURSDAY, AUGUST 10TH, 7:00 @ RUDY'S BARBEQUE ON 360.

Here's one for you microcar / audiophile wackos out there. Rotterdam designer **Wouter Geense** decided that the buying public's insatiable appetite for more, more, more demanded a ludicrous product. Like a 2.5cc, one-cylinder-powered turntable. Hey, more power, more speed! The product deliberately renders itself useless due to its super-high RPM speed which makes those two **Dick Smart** LP's (making a return appearance from a previous edition of ALCN) at the top of the page sound like **Alvin & The Chipmunks**. Or worse, if that's possible.

No, we haven't forgotten about **John Wallace** or his Isetta big block. John got his hemi and trans back from **Perry Bushong** mid-June and popped 'em back in the yellow car. Punched out cylinder, larger piston, all new everything. But does it work?

As of August 1, you only have xxx days of shopping time until Xmas. Maybe now's the time you should jump on a **NAO Designs Aphaenogaster** to put under the tree. A 350 watt motor will get you up to a hair-partin' 15 mph. A single disc brake reverses the process. No price as of yet.

Yes sir! These four ladies got a photo-op at the **River Place Fourth of July Parade** on John's maiden voyage with the new motor.
